TABLE OF CONTENTS

1. Introduction

2. System Overview

3. Functional Requirements

4. User Interface Requirements

5. Use Case Description

6. Data Requirements

7. Non-Functional Requirements

8. Business Rules

9. Assumptions

10. Constraints

11. Appendix

1. Introduction

This document provides a detailed description of the functional requirements for the HRMS Employee Lifecycle and Leave Management System. It explains how the system will function and how different users such as employees, managers, and the HR team will interact with it.

The purpose of this document is to translate the business requirements defined in the BRD into clear system-level functionalities. It will serve as a reference for development, testing, and implementation to ensure the system meets business needs.

2. System Overview

The HRMS system is designed to manage employee-related processes with a focus on leave management. It provides a centralized platform where employees can apply for leave, managers can review and approve requests, and HR can maintain accurate records.

The system will include modules such as user authentication, employee dashboard, leave management, approval workflow, and notifications. Each module will support smooth interaction between users and improve overall efficiency.

3. Functional Requirements

3.1 Authentication Module

- The system should allow users to log in using valid email and password
- The system should validate user credentials before granting access
- The system should provide a “Forgot Password” option

3.2 Employee Module

- The system should allow employees to view their profile details
- The system should allow employees to view leave balance and history

3.3 Leave Management Module

- The system should allow employees to apply for leave
- The system should capture details such as leave type, date, and reason
- The system should allow employees to view leave status

3.4 Approval Module

- The system should allow managers to view leave requests
- The system should allow managers to approve or reject requests
- The system should require managers to provide comments (optional)

3.5 Notification Module

- The system should notify employees when leave status is updated
- The system should notify managers when a new leave request is submitted

4. User Interface Requirements (Wireframes)

The system will include user-friendly screens to support different user interactions. These screens are designed to be simple, clear, and easy to navigate.

4.1 Login Screen

The login screen allows users to access the system using their credentials.

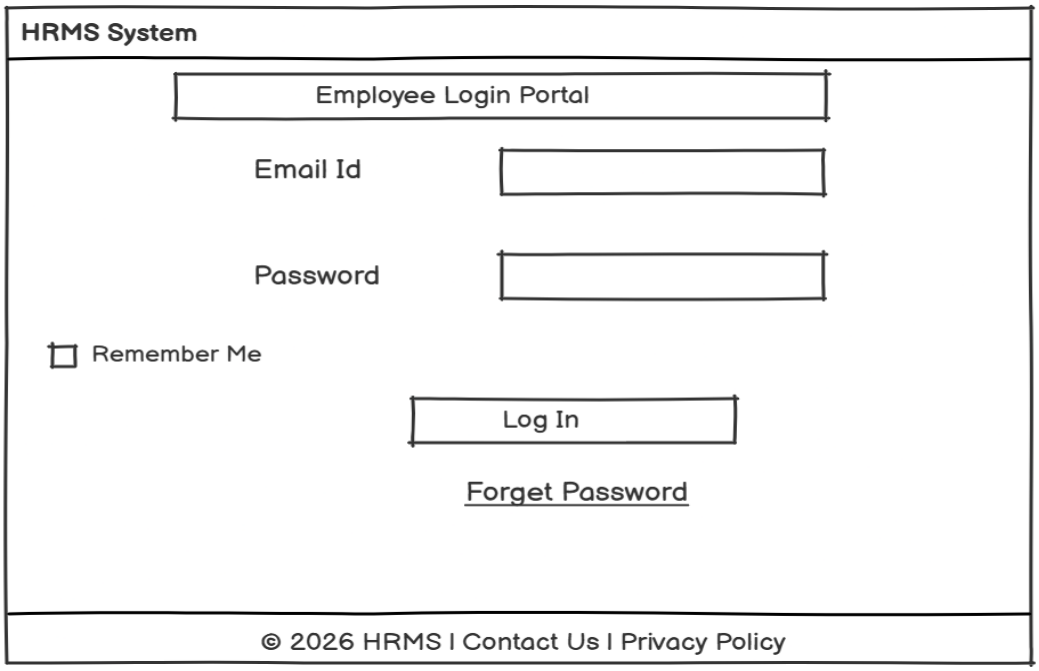
Fields:

- Email ID
- Password

Actions:

- Log In button
- Remember Me checkbox
- Forgot Password link

(Refer to Login Screen Wireframe)



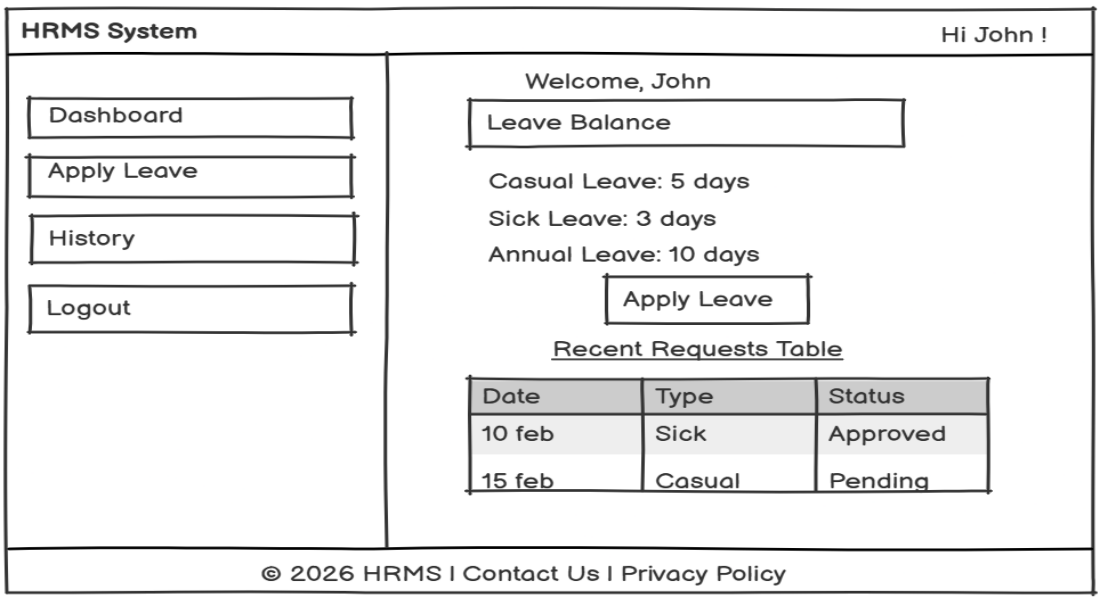
4.2 Employee Dashboard

The dashboard provides an overview of employee information and quick access to key features.

Features:

- Welcome message
- Leave balance summary
- Apply Leave button
- Navigation menu

(Refer to Employee Dashboard Wireframe)



4.3 Apply Leave Screen

This screen allows employees to submit leave requests.

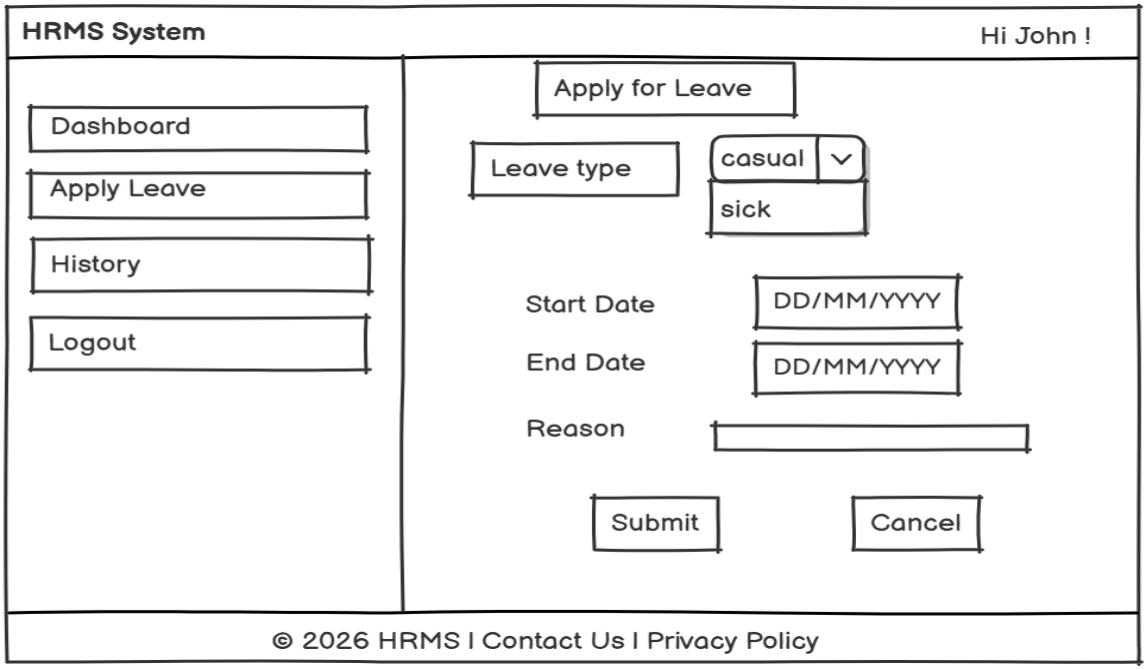
Fields:

- Leave type
- Start date
- End date
- Reason

Actions:

- Submit button
- Cancel button

(Refer to Leave Screen Wireframe)



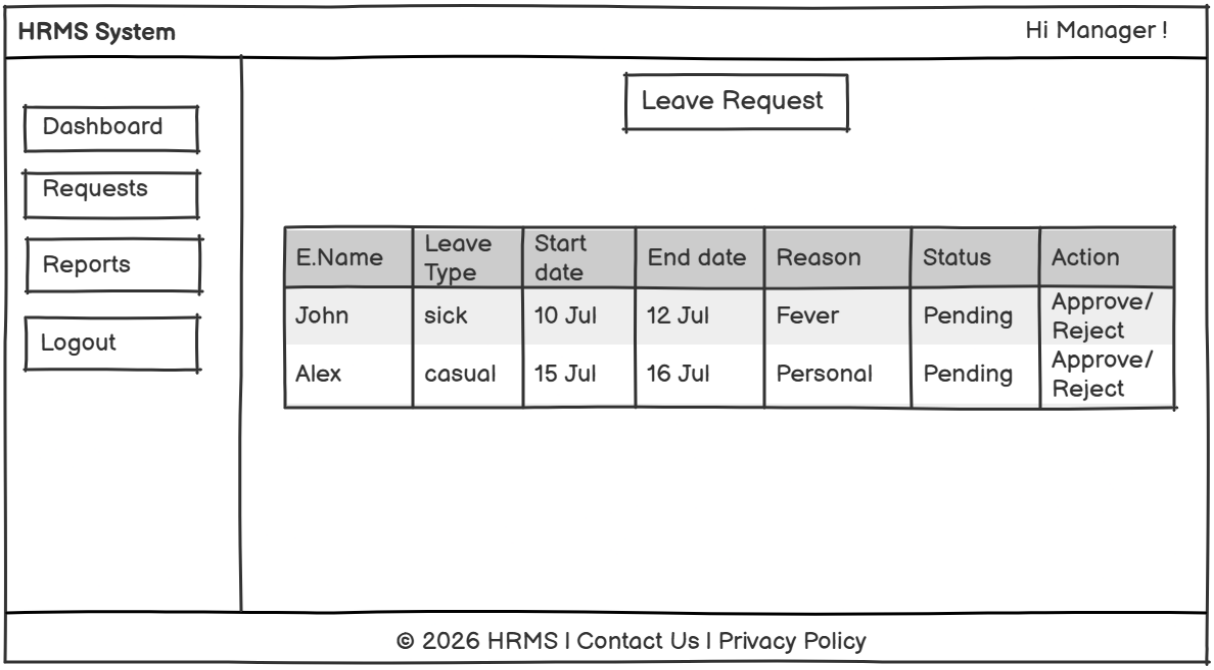
4.4 Manager Approval Screen

This screen allows managers to review and take action on leave requests.

Features:

- List of leave requests
- Employee name and leave details
- Approve / Reject buttons

(Refer to Manager Approval Screen Wireframe)



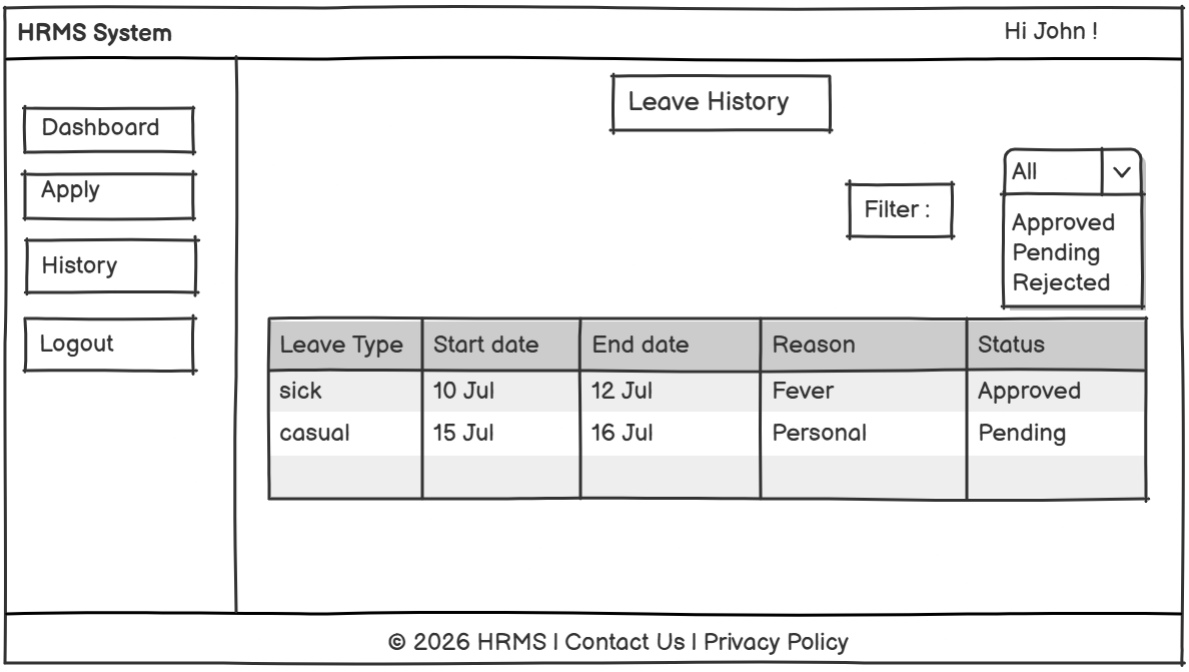
4.5 Leave History Screen

This screen allows employees to view their past leave records.

Features:

- List of previous leave requests
- Status (Approved / Rejected / Pending)

(Refer to Leave History Screen Wireframe)



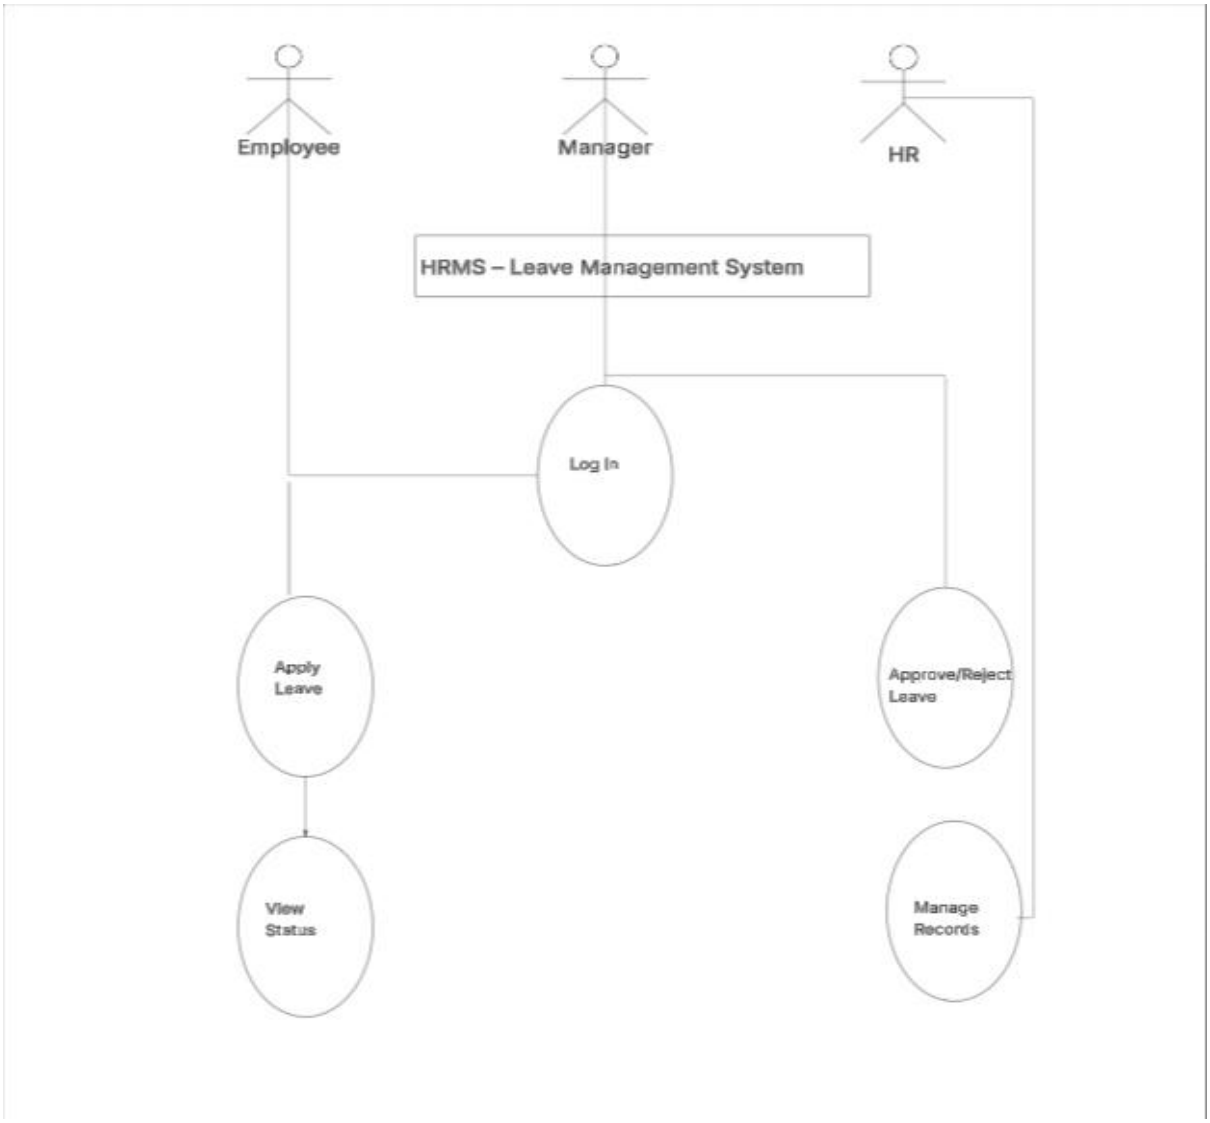
5. Use Case Description

Use Case: Apply Leave

- **Actor:** Employee
- **Description:** Employee applies for leave through the system

Flow:

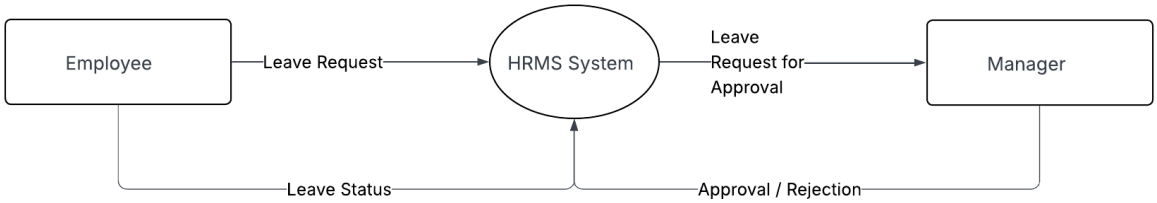
1. Employee logs into system
2. Employee selects “Apply Leave”
3. Employee enters leave details
4. Employee submits request
5. System sends request to manager



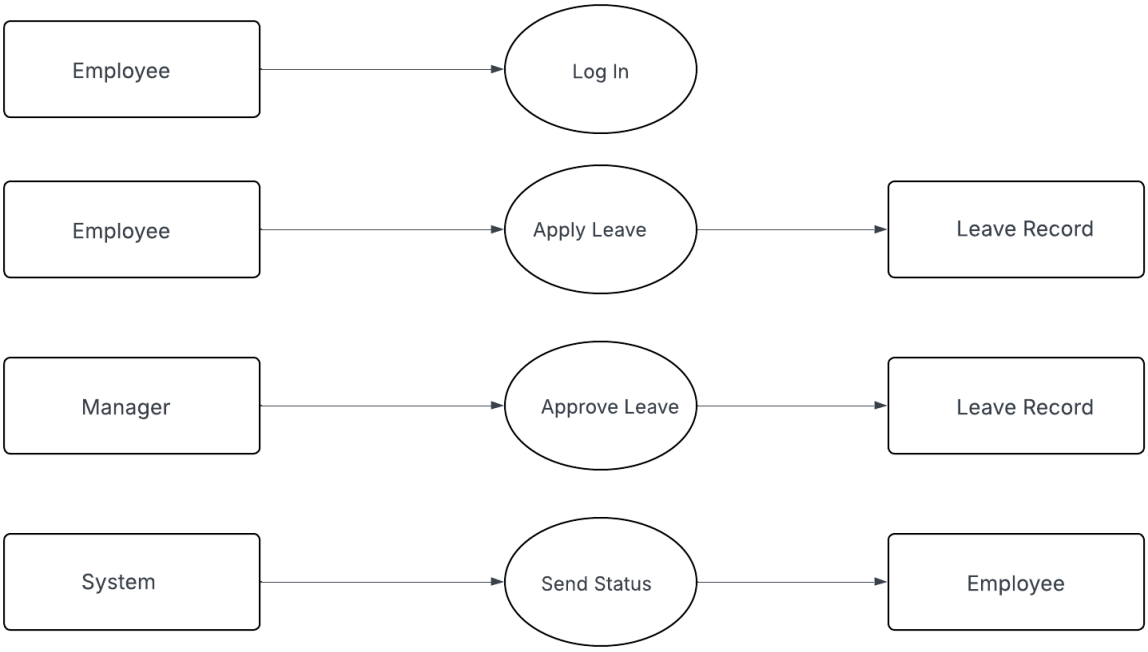
6. Data Requirements

The system will store and manage the following data:

- Employee details (Name, ID, Email)
- Leave details (Type, Dates, Reason)
- Leave status (Pending, Approved, Rejected)
- Manager details
- Approval history



(The Level 0 Data Flow Diagram provides a high-level overview of how data flows between users and the system.)



(The Level 1 Data Flow Diagram provides a detailed view of internal processes and how data is stored and processed.)

7. Non-Functional Requirements

- The system should respond within acceptable time limits
- The system should ensure data security and restricted access
- The system should be user-friendly and easy to navigate
- The system should be available during working hours with minimal downtime
- The system should handle multiple users without performance issues

8. Business Rules

- Employees must apply for leave before the leave date
- Managers must review leave requests within a defined time
- Leave cannot be approved if leave balance is insufficient
- Only authorized users can approve leave requests
- Leave records must be maintained for tracking and audit purposes

9. Assumptions

- Users will have valid login credentials
- Users will follow the defined process for applying leave
- Internet access will be available
- Managers will review requests on time
- HR will maintain records regularly

10. Constraints

- The system will be developed within a limited timeframe
- Only basic leave management features are included
- The system will be web-based (no mobile app in this phase)
- Limited tools and resources will be used

11. Appendix – Approval and Sign-off

The following stakeholders have reviewed and approved the Business Requirements Document for the HRMS system.

Name	Role	Signature	Date
HR Manager	Business Stakeholder		
Project Manager	Project Owner		
IT Lead	Technical Stakeholder
